PROFILE

Product leader with ten years building the operating spine across product, engineering, sales and customer success in enterprise B2B SaaS spanning ERP, Payroll and HCM. I set up intake processes, prioritisation cadences and decision logs that other teams actually follow, keep trade-offs and dependencies visible, and turn product strategy into board-level narratives founders and executives can act on. I have hired and led product and engineering teams from scratch — including 18 direct reports at Alii — and currently run cross-functional taskforces, PRD ownership and the agentic AI and international expansion agenda at Wiise.

PROFESSIONAL EXPERIENCE

Principal Product Manager — Wiise

Sep 2025 – present · Remote

- Author comprehensive PRDs for Wiise Payroll and work directly with the Chief Customer Officer to align product outcomes with commercial growth targets, keeping open trade-offs, dependencies and escalations tracked to closure.
- Run the intake and prioritisation cadence across product and engineering work, grouping incoming requests into defined product outcomes rather than reactive fixes so teams have clarity, transparency and a say in what gets built.
- Produce monthly executive communication packs for the executive leadership group of eight, giving senior stakeholders the roadmap confidence, decisions and blockers they need to act.
- Lead the International Expansion Taskforce as a cross-functional coordination body, delivering a 3-year expansion blueprint for the UK, Europe and North America with product requirements mapped to local regulatory frameworks.
- Designed, managed and shipped the Go-to-Market Agent and Portal to Beta — Wiise's first AI-native customer-facing growth tool — analysing customer ERP data to surface lookalike B2B prospects, now in customer hands.
- Built an agentic AI roadmap projected to automate 90% of pre-liability payroll audits, and designed a Pre-Flight compliance agent targeting elimination of 100% of preventable post-run corrections.
- Set the strategic product direction for Wiise's ERP and Payroll ecosystem, sequencing a suite of autonomous AI agents across compliance, sales growth and customer success against international scalability goals.

Head of Product — MYOB

Oct 2023 – Sep 2025 · Brisbane, QLD

- Ran cross-functional alignment across engineering, marketing, sales and customer success against shared OKRs, leading three direct reports and owning end-to-end delivery of the Enterprise People Capability platform.
- Set the prioritisation cadence and decision log for the platform area, owning commercial outcomes including ARR growth and customer retention for a core MYOB product.
- Built and maintained executive stakeholder relationships, translating product strategy into board-level narratives and investment cases with direct influence over investment decisions.
- Led design of an AI-driven Awards interpretation feature, cutting manual compliance effort for customers navigating Australia's Modern Awards framework.
- Grew product CSAT by 12 points across the People capability suite and increased channel sales by 42% year-on-year through targeted partner engagement and enablement.

Head of Product — Newbook
Aug 2021 – Oct 2023 · Gold Coast, QLD

- Led product strategy for Newbook's SaaS platform, managing three direct reports and establishing an intake and prioritisation cadence that aligned the roadmap to business objectives and market opportunity.
- Identified a market gap through customer and competitor research and led an initiative that generated $1.5M in first-year revenue and won the 2023 CIAA Innovation Award.
- Designed and delivered an AI-driven demand forecast tool that expanded the platform's data and analytics capability.
- Coordinated priorities with the executive team and cross-functional leads to align go-to-market execution.
- Delivered data-driven improvements that drove 22% YoY sales growth and reduced churn from 8% to 2%.

Head of Product — Alii Technology Group
Oct 2016 – Aug 2021 · Brisbane, QLD

- Founding Head of Product: took Alii's core Accounts Payable product from concept to commercial release, defining and owning the full roadmap against company strategy and investor commitments.
- Built the product and engineering team from scratch and directly led 18 people across development, product management and QA, establishing hiring frameworks, delivery practices and the cadences the team ran on.
- Integrated ML models and OCR to automate invoice data extraction, replacing manual AP data entry and materially reducing customer processing time.
- Ran market and customer discovery that identified unmet needs in the AP space, shaping the positioning that drove early commercial traction.
